Applicant(s)

DONG ET AL.

Examiner

Lisa V. Cook

Art Unit

1641

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 21 October 2002 .
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 48-68 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 48-68 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☒ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

## Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_ .
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☒ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)                      4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_\_ .
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)                      5) ☐ Notice of Informal Patent Application (PTO-152)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) \_\_\_\_\_ .                      6) ☐ Other: \_\_\_\_\_ .

Application/Control Number: 09/252,828  
Art Unit: 1641

### **DETAILED ACTION**

#### ***Election/Restriction***

1. Applicant's response to the Restriction Requirement mailed 8/27/02 is acknowledged. Applicants provisionally elected Group I (claims 48-49, 57-60., and 63-64) with traverse (paper #34, filed 9/27/02). The restriction is traversed because all the claims were previously considered prior to the filing of the CPA. The newly submitted claims corrected minor errors which appear in the finally rejected claims. This argument was carefully considered and found persuasive. The Restriction Requirement mailed 8/27/02 in paper #33 is vacated. Currently, Claims 48-68 are pending and under consideration.

### **OBJECTIONS WITHDRAWN**

#### ***Oath/Declaration***

2. A new oath or declaration is required because the date inventor Ke-Wen Dong signed the oath/Declaration is not provided. The wording of an oath or declaration cannot be amended. If the wording is not correct or if all of the required affirmations have not been made or if it has not been properly subscribed to, a new oath or declaration is required. The new oath or declaration must properly identify the application of which it is to form a part, preferably by application number and filing date in the body of the oath or declaration. See MPEP §§ 602.01 and 602.02.

A new declaration and oath was filed in response to the examiner request (paper #34, filed 9/27/02), therein obviating the objection. The objection is withdrawn.

**OBJECTIONS MAINTAINED**

***Drawings***

3. The drawings in this application are objected to by the Draftsperson as informal. Any drawing corrections requested, but not made in the prior application should be repeated in this application if such changes are still desired. The drawings in this application were previously objected to by the Draftsperson under 37 CFR 1.84 or 1.152 (see PTO-948) in paper #11 mailed 5/9/00. Applicant is required to submit a proposed formal drawing correction in reply to this action. If the drawings were changed and approved during the prosecution of the prior application, a petition may be filed under 37 CFR 1.182 requesting the transfer of such drawings provided the parent application has been abandoned. However, a copy of the drawings as originally filed must be included in the 37 CFR 1.60 application papers to indicate the original content. The objection is maintained.

***Information Disclosure Statement***

4. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the examiner on form PTO-892 or applicant on form 1449 has cited the references they have not been considered.

Applicant stated that an Information Disclosure Statement was filed in response to the examiner request (paper #12, filed 6/28/00), however no record of such IDS is found in the instant application. Applicant is invited to re submit the papers.

**NEW GROUNDS OF REJECTIONS NECESSITATED BY AMENDMENT**

***Claim Rejections - 35 USC § 101***

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain patent therefore subject to the conditions and requirements of this title.

5. Claims 61-62 and 66-68 are directed to non-statutory subject matter. There is no recitation of isolation or purification. Therefore, the claimed glycoprotein and/or glycopolypeptide read on naturally occurring materials, which are considered to be non-statutory and non-patentable subject matter within the scope of 35 U.S.C. 101. See Official gazette, 1077 O.G. 24, April 21, 1987. It is recommended that the claims incorporate the claim language, "isolated or purified" to overcome this rejection.

***Please note: Applicant has not addressed the following prior art rejections. Accordingly they are maintained and reiterated below.***

**REJECTIONS MAINTAINED**

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 63, 65, and 66 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 1641

A. Claims 63, 65, and 66 are vague and indefinite because it is unclear as to what the term "acrosome reaction" entails. The claim recites a glycopolypeptide that can strongly bind human spermatozoa and induce an acrosome reaction in the spermatozoa. Because the term is not defined in the disclosure, the metes and bound of the claim cannot be determined. Is it applicant's intent to define any event involving a spermatozoon that releases an egg-penetrating enzyme? Please define.

***Claim Rejections - 35 USC § 102***

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

I. Claims 48-56 and 60-68 are rejected under 35 U.S.C. 102(b)(e) as being anticipated by Dean (U.S. Patent #5,641,487).

Dean disclosed a polypeptide and functional derivatives thereof which have human ZP3 activity or human ZP3 antigenicity. The polypeptides can be produced either synthetically or by recombinant DNA technology. Specifically, the polypeptide to be expressed is coded for by a DNA sequence or more accurately a nucleic acid sequence.

Application/Control Number: 09/252,828

Art Unit: 1641

The nucleic acid sequence is optionally transcribed and translated to the target polypeptide via cloning into a vector transformed into a host cell. The vector may be self-replicating or it may integrate into the DNA of the host. (see abstract, claims, and columns 1-4). The resulting glycopolypeptides produced in this invention comprised several amino acid lengths and they were found to be 97.1% homologous with the instant invention product in SEQ ID NO:2. (MPSRCH comparing protein-protein database search utilizing BLOSUM62 – GenCore version 4.5).

II. Claims 48-56 and 60-68 are rejected under 35 U.S.C. 102(b)(e) as being anticipated by Dean (U.S. Patent #5,672,488).

Dean disclosed a polypeptide and functional derivatives thereof which have human ZP3 activity or human ZP3 antigenicity. The polypeptides can be produced either synthetically or by recombinant DNA technology. Specifically, the polypeptide to be expressed is coded for by a DNA sequence or more accurately a nucleic acid sequence. The nucleic acid sequence is optionally transcribed and translated to the target polypeptide via cloning into a vector transformed into a host cell. The vector may be self-replicating or it may integrate into the DNA of the host. (see abstract, claims, and columns 1-4). The resulting glycopolypeptides produced in this invention comprised several amino acid lengths and they were found to be 97.1% homologous with the instant invention product in SEQ ID NO:2. (MPSRCH comparing protein-protein database search utilizing BLOSUM62 – GenCore version 4.5).

Art Unit: 1641

***Response to Arguments***

In response to applicant argument that no prima facie case of obviousness has been established with regard to “a glycopolypeptide that can bind human spermatozoa at least 10 times as strong as an equivalent molar amount of mouse ZP3”, it is noted that the cited references disclose sequence identification number 2. The functional language of applicants claim do not render the claim patentable over the prior art.

The functional recitation has not been given patentable weight because it is narrative in form. In order to be given patentable weight, a functional recitation must be expressed as a "means" for performing the specified function, as set forth in 35 USC § 112, 6th paragraph, and must be supported by recitation in the claim of sufficient structure to warrant the presence of the functional language. *In re Fuller*, 1929 C.D. 172; 388 O.G. 279.

Further, it has been held that the recitation that an element is "capable of" performing a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense. *In re Hutchison*, 69 USPQ 138.

***Claim Rejections - 35 USC § 103***

12. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1641

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

I. Claims 57-59 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dean (U.S.Patent#5,641,487) or Dean (U.S.Patent#5,672,488) in view of Chamberlin et al. (Proc.Natl.Acad.Sci.USA, Developmental Biology, Vol.87, pp.6014-6018, August 1990) and in further view of Stern et al. (U.S.patent#5,869,053).

Please see previous discussions of Dean(5,641,487) and Dean(5,672,488) as set forth above.

Dean(5,641,487) and Dean(5,672,488) differ from the instant invention in not identifying the specific full-length structure of Human ZP3 cDNA and the specific transducing cell line of the PA-1.

However, Chamberlin et al. disclose this limitation in the reference found in the Proc.Natl.Acad.Sci.USA, Developmental Biology, Vol.87, pp.6014-6018, August 1990. The full-length was previously established in this teaching. Chamberlin et al. take advantage of the cross-hybridization of the mouse cDNA and human DNA to isolate and characterize the full-length cDNA clones of human ZP3 (deposited in the GenBank data base-accession no.M35109). Human ZP3 cDNA was purified from total RNA isolated from a human ovary and used as the first-strand synthesis with oligonucleotide primer A2T15. The first-strand was amplified by PCR.

Art Unit: 1641

Further, the utility of the PA-1 (human ovarian carcinoma) cell line in PCR techniques involving glycoproteins was also established. In the patent of Stern et al. the glycoprotein 5T4 was identified in human trophoblast. In table III, the reactivity of MAB 5T4 with normal cells and transformed cell lines in cell-surface immunofluorescence and radiobinding assays showed a comparatively high binding index (4.9 in the Ovary cell PA-1).

A comparison of reactivity with negative control xenogeneic cell lines indicated positive expression of the antigen. (Column 8, lines 52-61) Dean(5,641,487), Dean(5,672,488), Chamberlin et al., and Stern et al. are analogous art because they are from the same field of endeavor, all the cited inventions teach method involving glycoprotein production and isolation techniques.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the ovarian cell line PA-1 and human ZP3 as taught by Chamberlin et al., and Stern et al. in either method of Dean(5,641,487) and Dean(5,672,488) to perform glycoprotein production via the transduction of a human ovarian cell line with a polynucleotide that encodes a polypeptide comprising ZP3 because such methods of evaluation as taught by Chamberlin et al., and Stern et al. is well known in the art. A person of ordinary skill in the art would have had a reasonable expectation of success utilizing such techniques, because both the PA-1 cell line and the full-length human ZP3 sequence were established in the prior art.

The motivation to utilize such compounds can be found in the predictable glycosylation sites of ZP3 and its homology to the mouse analogue, which has strong binding affinity for spermatozoa and induces an acrosome reaction. See Chamberlin et al. page 6015 1<sup>st</sup> and 2<sup>nd</sup> column.

Art Unit: 1641

***Response to Arguments***

In response to applicant argument that no prima facie case of obviousness has been established with regard to “a glycopolypeptide that can bind human spermatozoa at least 10 times as strong as an equivalent molar amount of mouse ZP3”, it is noted that the cited references disclose sequence identification number 2. The functional language of applicants claim do not render the claim patentable over the prior art.

The functional recitation has not been given patentable weight because it is narrative in form. In order to be given patentable weight, a functional recitation must be expressed as a "means" for performing the specified function, as set forth in 35 USC § 112, 6th paragraph, and must be supported by recitation in the claim of sufficient structure to warrant the presence of the functional language. *In re Fuller*, 1929 C.D. 172; 388 O.G. 279.

Further, it has been held that the recitation that an element is "capable of" performing a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense. *In re Hutchison*, 69 USPQ 138.

In response to the argument that the reference of Stern et al. teaches away from the instant invention and is applied in hindsight it is noted arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986). Stern et al. were merely cited to establish that the PA-1 cell line was previously disclosed in the prior art.

Art Unit: 1641

In response to applicant's argument that the examiner's conclusion of obviousness is based upon improper hindsight reasoning, it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper. See *In re McLaughlin*, 443 F.2d 1392, 170 USPQ 209 (CCPA 1971).

In response to applicant's argument that the examiner's conclusion of obviousness is based upon improper hindsight reasoning, it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper. See *In re McLaughlin*, 443 F.2d 1392, 170 USPQ 209 (CCPA 1971).

13. For reasons aforementioned, no claims are allowed.

14. Papers related to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Group 1600 via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform to the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). The Group 1641 Fax number is (703) 308-4242, which is able to receive transmissions 24 hours/day, 7 days/week.

Art Unit: 1641

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lisa V. Cook whose telephone number is (703) 305-0808. The examiner can normally be reached on Monday-Friday from 8:00 AM - 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Long Le, can be reached on (703) 305-3399.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0196.
